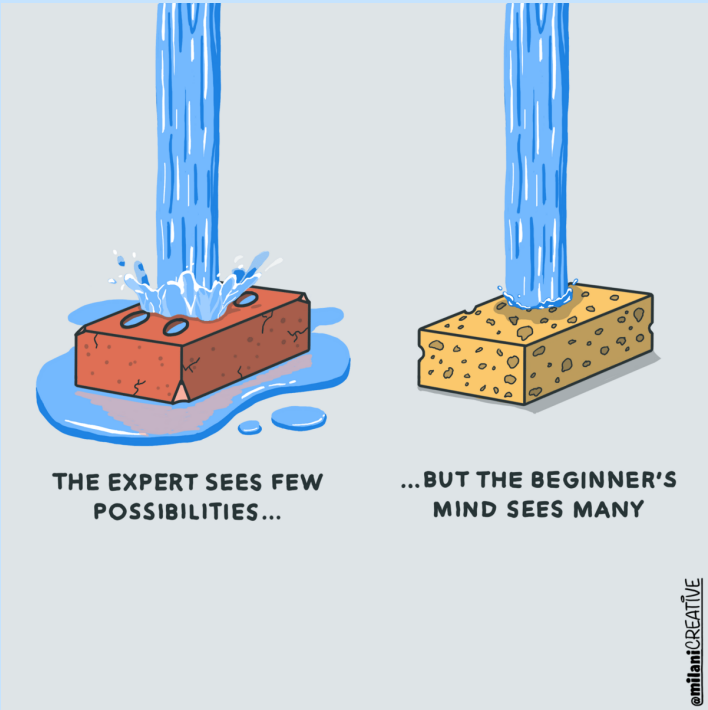
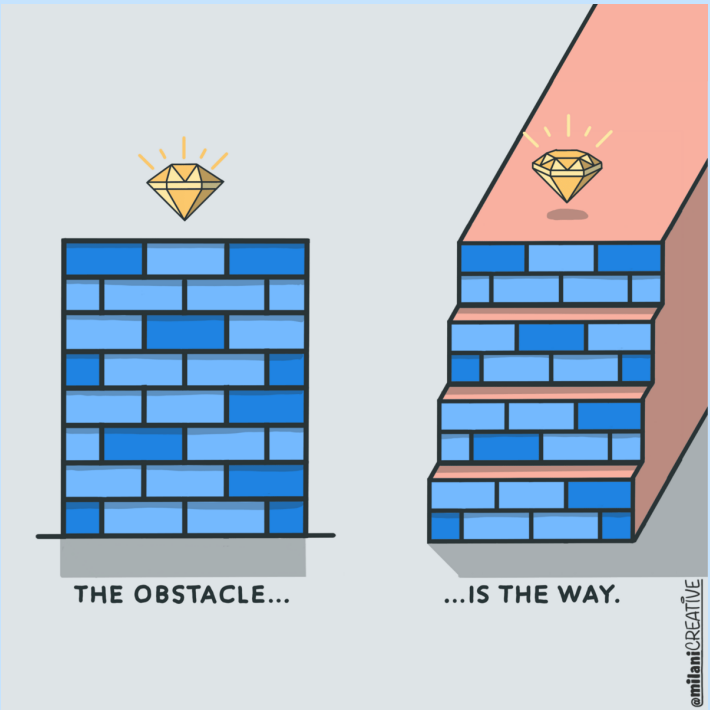
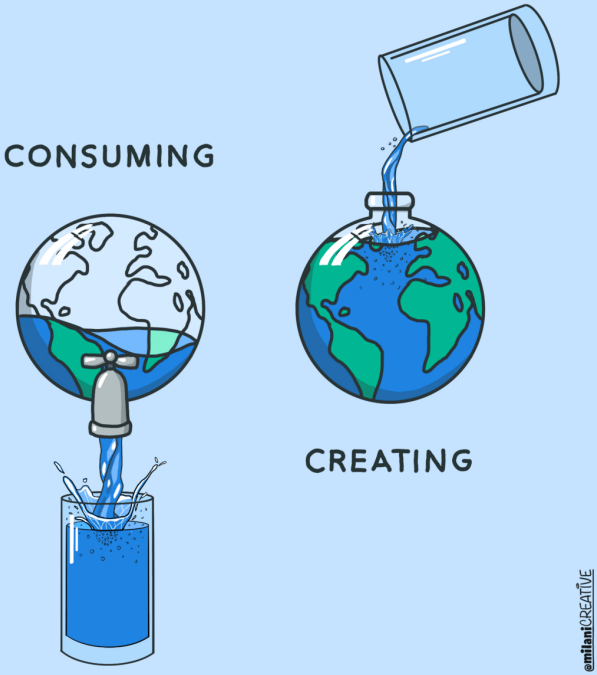
2022



The secret sauce to solving difficult problems is combining the efficiency of the expert with the openness of a beginners mind.There's tremendous value in specialization and expertise.But there's also a hidden trap.To become an expert, you have to zoom in and learn deeply about a singular domain. But as you specialize and your efficiency improves, your attention gets narrower and you sacrifice creativity for efficiency.
Having a beginner's mind is about: snapping yourself out of autopilot mode, sustaining curiosity and checking your assumptions about what's possible.



How you perceive the obstacles in your life defines your path forward.
The obstacle isn't a bug. It's the feature.



On face value, consuming is taking from the world, whereas creating is giving back. The world is a finite and fragile resource. We need to drink from it to survive but if we consume without giving back, it will run dry.
Be generous. Create something and share it with the world. Give more than you take.

The word priority initially means treating one thing above all others. Having multiple priorities is the same as having no priority.When you cut off the excess, you cultivate the space to grow.

Take the big thing you're trying to achieve and do a 1% version of it.
If there's a big gamble you've been considering, is there a way to make a smaller gamble to test your assumptions?

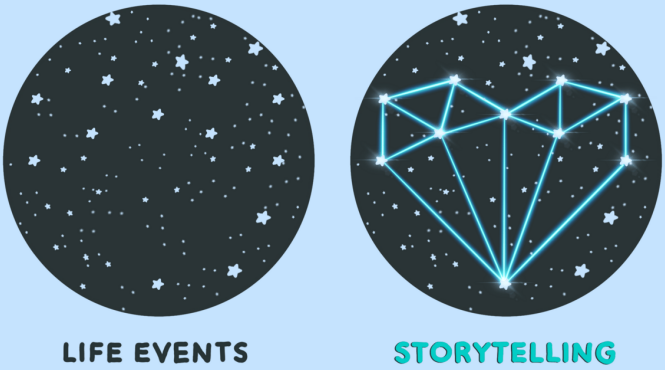
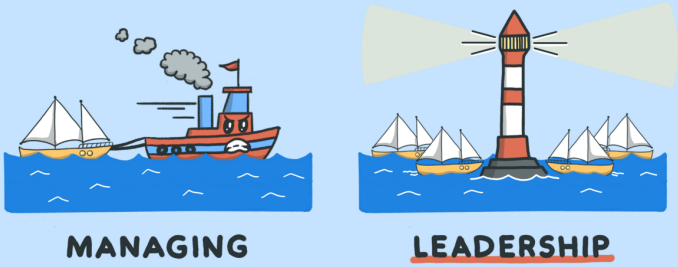
Don’t let it all get to your head.

There's a bunch of advice on time management but little on energy management.
To some willpower is grit or the ability to persevere. To others it's the ability to resist.
For me, it's the discipline to stick to my commitments.



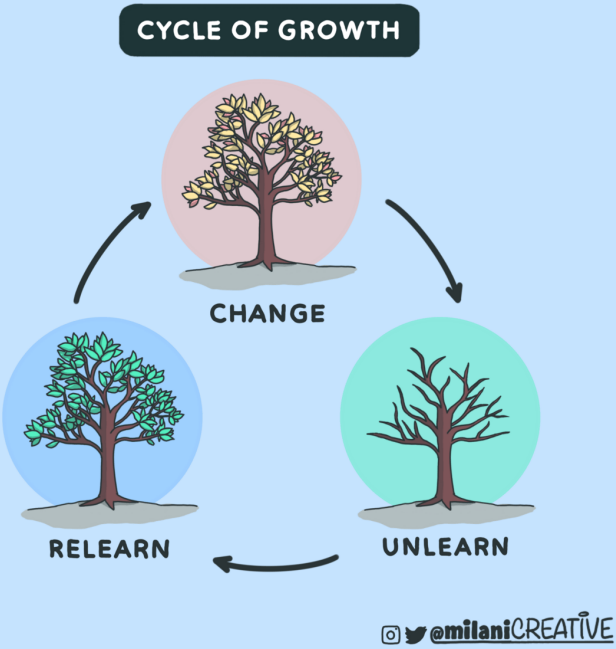
@milaniCREATIVE

We may think we don’t have stories worth sharing, but that’s just because we haven’t connected the dots yet.



@milaniCREATIVE

Often management and leadership are words used interchangeably but there is a difference.
Both are skills that can be learned.
Both are essential in an organization.
But you should know what you're trying to do and take care to recognize when you should lead and when you need to manage.



Intelligence is traditionally viewed as the ability to think and learn. Yet in a turbulent world, there's another set of cognitive skills that might matter more: the ability to rethink and unlearn.

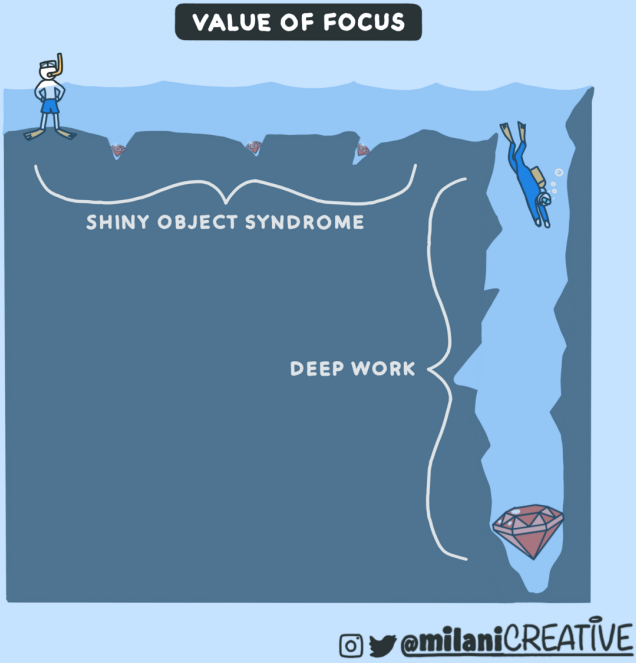
THOUGHTS
WRITING
@milaniCREATIVE



Shiny object syndrome is when you're constantly jumping from project to project because you think the next new thing is going to bring more value than the current thing. The irony is that the reason the grass is greener somewhere else is because you never stay long enough where you are to take care of it.
